

Posterior Malleolus Fracture Management Survey

International Surgical Practice Variation Study

How do surgeons around the world manage posterior malleolar fractures?

An anonymous, ethics-approved survey on classification, fixation indications, approach and technique preferences, syndesmosis assessment, and how practice has evolved over the last decade.

- **8-10 minutes**
single sitting, resume supported
- **4 clinical cases**
interactive CT viewer — axial, sagittal, coronal
- **Fully anonymous**
no patient data collected; CHERRIES / CROSS
- **4 languages**
English · Deutsch · Español · Türkçe

Case 2 — sagittal reconstruction from the in-survey CT viewer
